

# COMMUNIQUE

## From Small Craft Harbours NL Region

### USED OIL MANAGEMENT ASSOCIATION (UOMA) PROGRAM & SERVICES

---

As you may be aware, UOMA Atlantic is managing the delivery of the used oil/used oil by-product recycling program in our province. The following information is provided to assist harbour authorities in understanding the various services associated with this program:

#### Waste Oil Collection

Harbour locations that have HA managed waste oil collection tanks on site through the Small Craft Harbours program can request collection from one of the following collectors through the UOMA program:

- Pardy's Waste Management and Industrial Services Ltd.  
1-709-368-4350
- Terrapure Environmental  
1-709-687-1815
- CleanEarth Industrial Services  
902-835-9095

#### Waste Oil By-Product Drums

Interested harbour authorities will be provided 50 gallon metal drums to collect waste oil by-products (used oil filters, used glycol, empty brake cleaner & lubricant aerosol cans). To obtain these drums, you must submit a request form to the SCH Regional Office, outlining the number of barrels needed and the proposed location of the drums. Once approved, the SCH Regional Office will let the participating collector companies know and the company will reach out to the HA to coordinate delivery. Delivery and collection of these drums are from the following collectors through the UOMA program:

- Pardy's Waste Management and Industrial Services Ltd.

- 1-709-368-4350
- Terrapure Environmental  
1-709-687-1815
- CleanEarth Industrial Services  
902-835-9095

**NOTE: These drums are NOT under any circumstance to be used to store waste oil.**

### Oil, Antigel/Glycol, DEF Plastic Container Recycling

Harbour Authorities that are interested in participating in this aspect of the program will receive a 360L plastic bin, as well as bags, to store certain plastic containers in preparation for recycling. Acceptable containers include 1- 5L containers that used to contain engine & gear oil, coolant/anti-freeze/glycol, power steering fluid, brake fluid, transmission fluid as well as 20L pails that formally contained oil, coolant or hydraulic fluid (pails must be stacked inside of each other and lids on the top pail of the stack). To obtain these bins, the same process applies as the waste oil by-product drums, where the Harbour Authority must submit a request form to the SCH Regional Office. Delivery and collection of these bins are supplied by the following collector under the UOMA program:

- RPM Eco  
1-877-535-0777

**NOTE: All of the above collection services are covered by UOMA and **FREE** to harbour authorities.**

Should you have any questions concerning the program please contact either:
